Premier Energy Services Integrates Electric Steam Solution for Bioagra LLC.

Atlanta, Georgia – August 31, 2005 - Primer Energy Services announced today that it has been selected to design, construct and integrate a steam solution for a Bioagra LLC. The state-of-the-art solution will incorporate electric boilers in lieu of more common gas systems eliminating the dependency on the rising cost of natural gas.

Bioagra is the exclusive distributor of Agrastim, a feed supplement for livestock swine, poultry and shrimp industries. The Company recently began construction on the first of several new processing facilities in Hinesville, Georgia.

“We have defined several requirements to keep operating costs and environmental emissions to a minimum while ensuring that our manufacturing plant maintains maximum reliability,” said Mr. Neal Bartoletta, President and Chief Executive Officer of Bioagra. “Premier Energy Services has presented an innovative design and engineering capabilities that are clearly the best choice for our facility.”

Premier Energy Service’s use of electric boilers provides zero air emissions from the system and enables Bioagra personnel to concentrate on manufacturing rather than the typically intensive operations associated with gas boilers. Additionally, the electric resistance heating elements provide Bioagra the capability to closely monitor and match the steam demands of the manufacturing process with the quick response of the electric boiler, thereby optimizing energy costs.

“We are honored to be selected by Bioagra to be part of their new manufacturing facility development,” said Randy Davis, President and CEO of Premier Energy. “This installation showcases our ability to integrate alternative energy sources and further demonstrates our steam engineering leadership.”
