## **Premier Energy Services Completes Steam Boiler Upgrade for Procter & Gamble Company**

*Georgia plant achieves operating cost and gaseous emission reductions*

**Atlanta, Georgia – May 25, 2005** – Primer Energy Services announced today that it has completed the upgrade of an existing 140,000 pph boiler at a Procter & Gamble Company manufacturing plant. The facility is located in Albany, Georgia and is responsible for the production of Bounty and Charmin products.

The scope of the steam engineering upgrade project included a redesign of the steam boiler's combustion air supply and measuring systems, new combustion control philosophy implementation, tuning of burner fuel and air flows, and tuning of boiler response time to eliminate production interruptions.

The upgrading of Procter & Gamble's steam boiler system provides the ability to operate the system at higher output rates and over a wider range of output while maintaining its emissions compliance and improving overall production reliability.

"Procter & Gamble is a quality company, with strict adherence to safety regulations and code compliance laws," said Randy Davis, President & CEO of Premier Energy. "We are honored to have been selected to assist Procter & Gamble with their steam system upgrade."

Premier Energy Services was originally contracted to improve the overall operating performance and gaseous emissions output of the steam boiler system back in August of 2004. Since the completion of the upgrade, Premier Energy Services has been invited to attend Procter & Gamble's annual boiler safety certification course. This invitation demonstrates further Premier Energy Service's position as a leader in providing steam technology and solutions.
