Premier Energy Services Selected by Quaker Oats to Increase Steam

*New steam system maximizes existing technologies
to reduce wastewater and disposal costs*

Atlanta, Georgia – October 11, 2005 – – Primer Energy Services, a leading provider of steam technology and solutions, today announced that it has been selected by Quaker Oats Company to add steam capacity at a manufacturing plant in Mountaintop, Pennsylvania. The deployment of the solution will support increased manufacturing demands for the Gatorade product line.

“A careful analysis of startup and operating costs, production requirements, energy efficiency, emissions and the use of current assets versus new technology was conducted,” said Glenn Johnson, Corporate Manager for Energy Projects at Quaker Oats Company. “We ultimately determined the best option was to procure a new steam solution from Premier Energy Services.”

The solution will include state-of-the-art flame safety and combustion control systems on a new steam boiler to monitor and control fuel and air flow more accurately. The new boiler system will also capture waste heat and use it to pre-heat treated process water stored for Gatorade manufacturing. Additionally, upgrades will be performed on two existing boilers to completely utilize waste fuel and improve operating efficiency.

The new system combined with the upgrades will provide additional steam capacity for future plant expansions, improved steam system reliability, better methods to prove efficiency calculations and overall reduced operating costs.

“Our innovative steam engineering methods will leverage existing technologies to create additional steam power and save on energy and emissions for Quaker Oats,” said Randy Davis, President and CEO of Premier Energy. “This type of project further underscores our commitment to the environment.”
